Interventional Cardiology Products

Medical technology creates future

Company Profile

Shunmei Medical Co.,LTD was founded in 2009 and is headquartered in Shenzhen. We are committed to research and development, production and global sales of medical consumables related to Vascular Intervention and Anesthesiology.

Our production sites are located in Huizhou city, Guangdong Province and Hunan Province. Huizhou production site covers an area of 20,300 square meters. Hunan production site covers an area of 33,300 square meters.

Our company has set up 3 overseas wholly-owned subsidiaries.

Mission :

Bring patient back to health.

Vision :

Become a world-class research & development and manufacturing enterprise of medical interventional products.

PTCA Guidewire

Distal tip:

- 1) Easy to shape.
- 2) Possible to shape multiple times.
- 3) Hydrophilic coating is applied to increase the crossability and deliverability.

Distal tip:

- 4) Platinum coil provides excellent radiopacity.
- 5) Integral core wire structure (Core-to-tip design).
- 6) Optional to connect with extension wire.

Workhorse Guidewire :

Shun S

0.36mm(0.014inch)

- Tip load: 0.7g
- Tip radiopacity: 3cm
- Effective length: 190cm/ 300cm
- Tip coating material: Hydrophilic coating

Shun R

0.36mm(0.014inch)

- Tip load: 0.6g / 1.0g
- Tip radiopacity: 3cm
- Effective length: 190cm/300cm
- Tip coating material: Hydrophilic coating

Workhorse Guidewire :

Shun PT

0.36mm(0.014inch)

- Tip load: 0.9g
- Tip radiopacity: 10cm
- Effective length: 190cm/300cm
- Tip coating material: Polymer jacket with hydrophilic coating

Shun PT 1

0.35mm(0.014inch)

- Tip load: 1.4g / 2g
- Effective length: 190cm/300cm
- Tip coating material: Polymer jacket with hydrophilic coating

Shun C

0.35mm(0.014inch)

- Tip load: 1g / 3g
- Effective length: 190cm/300cm
- Tip coating material: Polymer jacket with hydrophilic coating

CTO Guidewire :

PTCA Balloon Dilatation Catheter

Note: For $\Phi 1.0\text{mm}$, $\Phi 1.25\text{mm}$ and $\Phi 1.5\text{mm}$, only one (1) Radiopaque Marker in the center of balloon

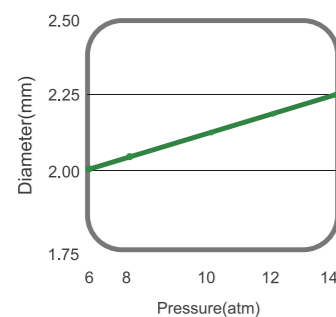

Soft and Rounding TIP

- Enhance the crossability
- Minimize the damage to the vessel wall

Tight Memory-Three-Fold Balloon

- Good performance of repeated dilatation
- Slender profile for enhanced crossability

Excellent Balloon Performane

- Controlled diameter growth per atm
- Stabilized properties and RBP value

Technical specification

Coronary Drug-coated Balloon Dilatation Catheter

coming soon

Basic information

- Sirolimus coated coronary balloon dilation catheter, which is an innovation in coronary angioplasty, provides a new way for specialists in coronary vascular therapy to treat vascular stenosis without the need for implants.
 1. Coronary Drug-coated Balloon Dilatation Catheter
 2. Drug coating component: second generation sirolimus coating (Rapamycin)
 3. Drug coating density: 4ug/mm²
 4. Catheter type: Rapid Exchange RX (0.014" guidewire)
 5. Pebax semi-compliant balloon
 6. Nominal pressure (NP) 8atm, rated burst pressure (RBP) 16atm
 7. Minimum introduction outside diameter: 0.016" (tapered tip)
 8. Catheter passability: 0.035" (φ3.0mm)

Product features

- Using second generation crystallized sirolimus and patented coating technology:
 1. Significantly reduce the loss rate during drug-coated balloon delivery and improve the drug transfer rate after the balloon adheres to the vessel wall.
 2. Tightly folded wrapping.
 3. Uniform drug coating on the balloon surface.

Technical specification

Catheter Design	Rapid exchange

Microcatheter (coronary)
Advantage features

1. The platinum-iridium radiopaque marker is 0.6mm long and 0.6mm away from the soft tip. A flexible distal segment with a hydrophilic coating allows the microcatheter to advance and pass through distal tortuous vessels.

2. The tube body is a variable diameter structure, and OD gradually decreases from the proximal to the distal end.

3. The cross section of the catheter is 3-layer structure, providing excellent pushability, torsion and support force, and the PTFE material in the inner cavity provides smooth transportation.

Intended use:

- The microcatheter is intended to be percutaneously introduced into coronary vessels and support a guidewire in crossing the localized stenotic lesion of vessel system in case the guidewire hardly crosses the lesion. It can also assist in the exchange of the guidewires.
- The microcatheter is also intended for injection of contrast media.

Shun Guider

Introducer Sets

Two options:
with or without
hydrophilic coating.
